

Governance In the Era of Disruptive Technologies

wisdom from the village to the world

Givemore Dube

Computer Society Regional Summer School
2014, Victoria Falls

Agenda

- Village rules
- Disruptive technologies working definition
- Disruptive technologies examples
- Governance levels
- IT Governance core
- Knitting the conference together

Rules of engagement

We all have the right and responsibility to shoot

I have the right and responsibility to decide what we shoot, when to shoot and how we shoot

We must all be intellectually disruptive

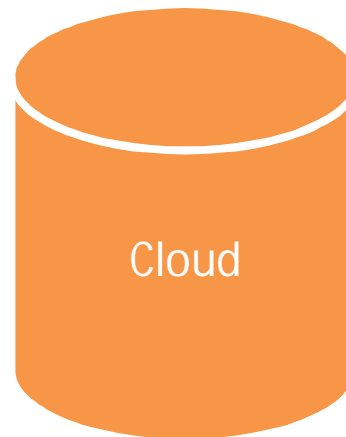

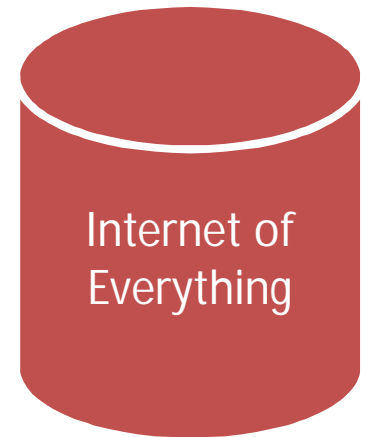

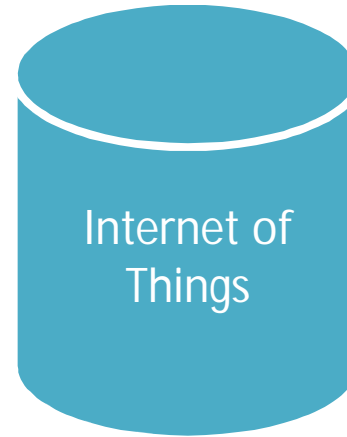

We are going to take a disruptive view to governance

Disruptive technologies

- Lightning change in the way of doing things that turn the village upside down
- Ginormous impact on the socio, economic, environmental and political landscape
- Two edged swords

Examples

IT Governance levels

IT Governance core

Knitting the conference together

Assumptions

- Participants knew we were already using disruptive technologies
- Participants were familiar with the enterprise IT governance framework

Expectations

- Participants to be able to appreciate disruptive technologies
- Participants able to realise the bigger puzzle all conference discussions fed into

The observations and outcome

- Not all participants were familiar with the governance framework
- Participants were initial completely disrupted
- Could not proceed with initial set programme
- Discussed governance issues piecemeal

Way forward

- Need for further dialogue on IT Governance at individual (micro), sector, community and national level and beyond
- Need to interrogate the framework the nation is using for IT Governance
- Knit the conference discussions together
- Produce papers that will inform the above processes
